

Goal: Get as much information as possible about what the user is expecting to accomplish so that we can give them their ideal result in as few steps as possible.

Goal: Present the response in a way that helps users evaluate the response.

Goal: Help the user articulate where the response falls short of their expectations or ideals, or how they'd like to move forward.

Goal: Encourage the user to provide feedback and help the user transition to the next step in their process.

**Initiation** - The user can...

**AI Response**

**Evaluation** - The user is asking...

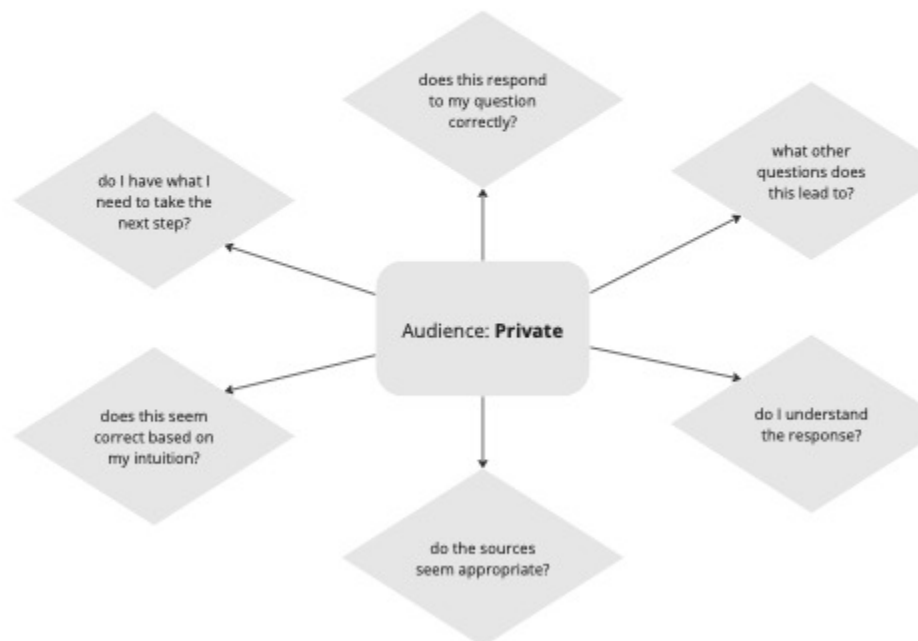

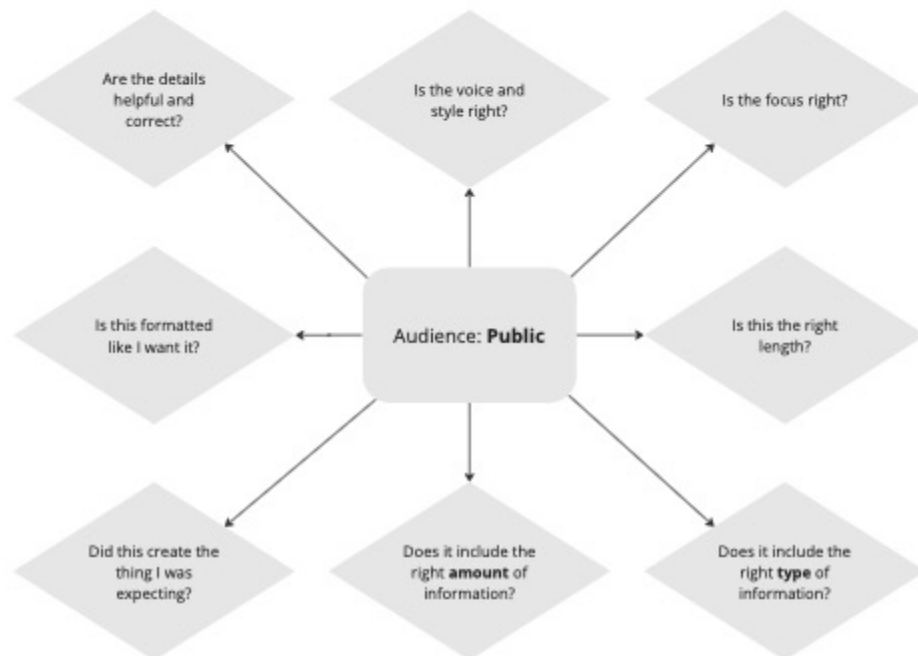

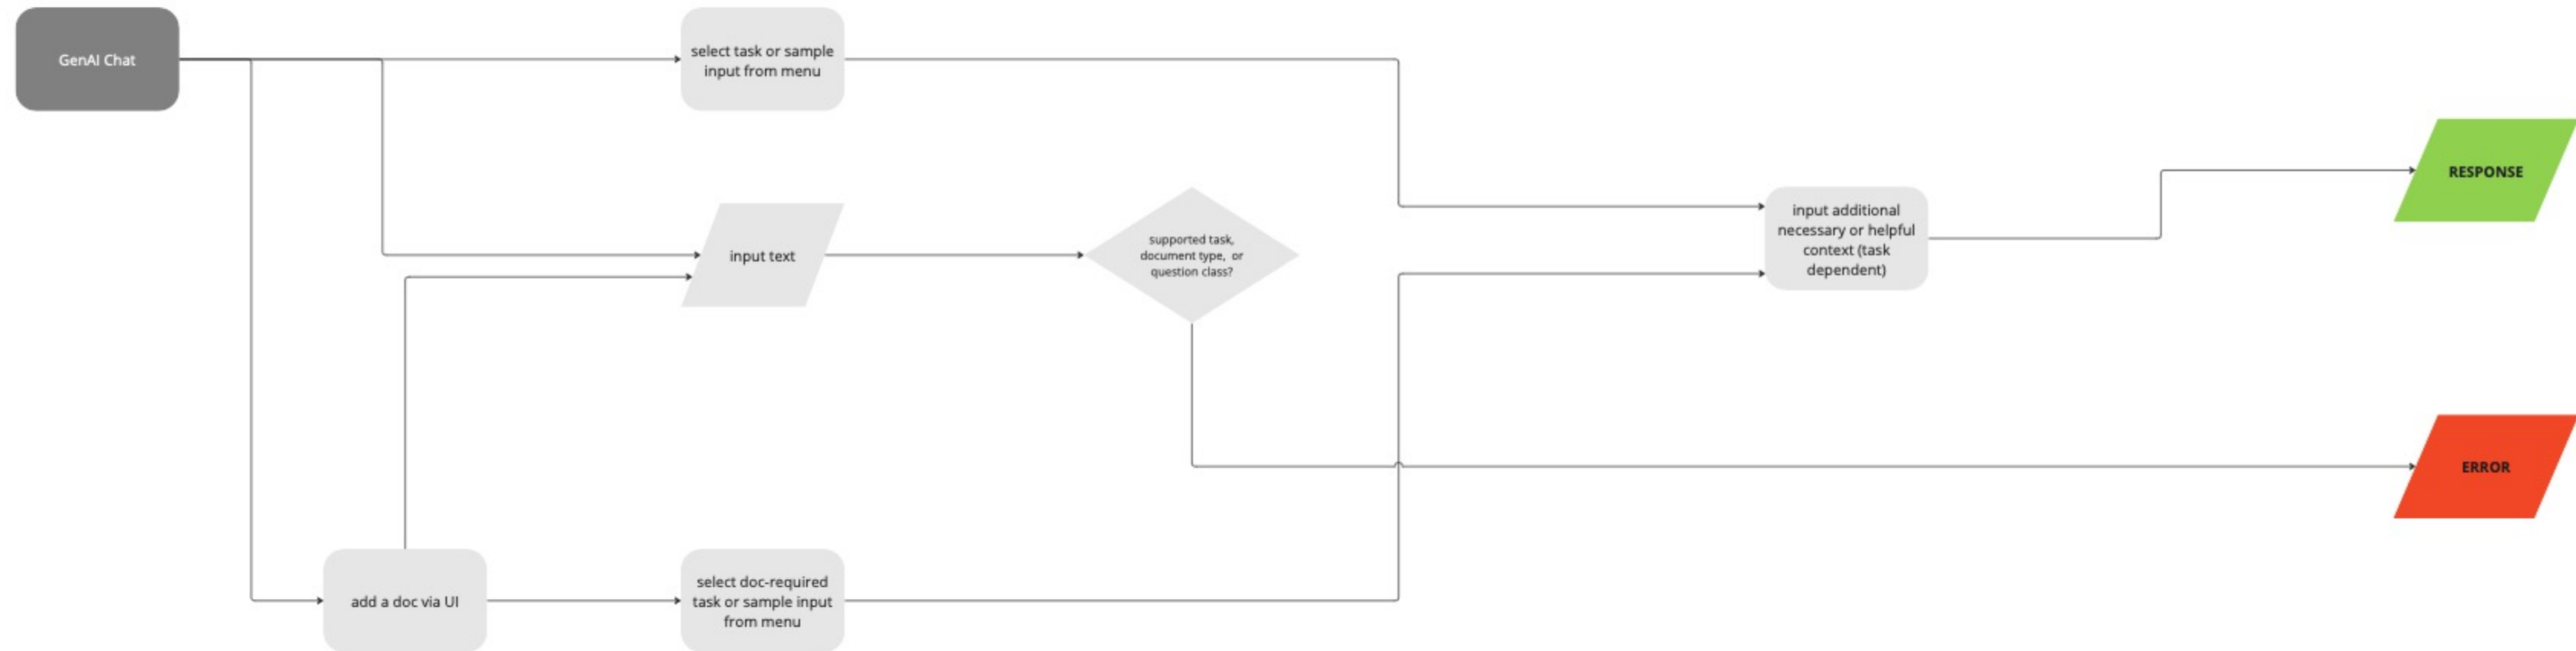

**Refinement** - The user adjusts the response for...

**Resolution** - The user ends the interaction by...
